AMENDMENT

Amendments to the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application.

1. (Currently Amended):   A computer-based system for a distributed web application wherein said framework is capable of accepting a communication, comprising:

a controller operable to accept the communication and provide the communication to a model;

the model operable to perform processing of the request and to determine a web page to be rendered;

the page operable to provide a response based on the request; and

wherein the web page belongs to a web page group;

wherein the web page is the target of a first action method; and

wherein the web page raises a second action method; and

wherein the second action method implements code that results in website navigation.

2. (Canceled)

3. (Currently Amended):   The computer-based system of claim [[2]] 1 wherein:

[[an]] the first action method can implement implements code that [[can]] results in website navigation, passing data, and/or invoking back-end business logic.

4. (Currently Amended):   The computer-based system of claim 1 wherein:

[[a]] the web page group can control controls page flow between pages and other page groups.

5. (Currently Amended):   The computer-based system of claim 1 wherein:

[[a]] the web page group can include includes application logic that is separate from a logic related to rendering a graphical user interface.

6. (Previously Presented): The computer-based system of claim 1 wherein:

the web page group can be nested within another web page group.

7. (Previously Presented): The computer-based system of claim 1 wherein:

the web page group maintains the state of the pages in the group.

8. (Previously Presented): The computer-based system of claim 1 wherein:

the web page group is a set of functionally related pages.

9. (Previously Presented): The computer-based system of claim 1, further comprising:

a global web page group to provide fallback action methods for the page.

10. (Currently Amended): The computer-based system of claim 1 wherein:

the web page ~~can be~~ is bound to a form; and

wherein the form encapsulates data that was posted to the page group by a web browser or other client.

11. (Currently Amended): A system for a distributed application wherein said framework is capable of accepting a communication, comprising:

a controller operable to accept the communication and provide the communication to a model;

the model operable to perform processing of the request and to determine a web page to be rendered;

the web page operable to provide a response based on the request;

~~wherein the web page can be the target of an action method; and~~

~~wherein the web page can raise an action method~~

wherein the web page is the target of a first action method; and

wherein the web page raises a second action method; and

wherein the second action method implements code that results in website navigation.

12. (Currently Amended): The system of claim 11 wherein:

[[an]] the first action method ~~can implement~~ implements code that can results in website navigation, passing data, and/or invoking back-end business logic.

13. (Previously Presented):   The system of claim 11 wherein:

    wherein the web page belongs to a page group.

14. (Currently Amended):   The system of claim 13 wherein:

    [[a]] the web page group can control page flow between web pages and other page groups.

15. (Currently Amended):   The system of claim 13 wherein:

    [[a]] the web page group can include application logic that is separate from a logic related to rendering a graphical user interface.

16. (Previously Presented):   The system of claim 13 wherein:

    the web page group can be nested within another web page group.

17. (Previously Presented):   The system of claim 13 wherein:

    the web page group maintains the state of the web pages in the group.

18. (Previously Presented d): The system of claim 13 wherein:

    the web page group is a set of functionally related web pages.

19. (Previously Presented):   The system of claim 11, further comprising:

    a global web page group to provide fallback action methods for the web page.

20. (Currently Amended):   The system of claim 11 wherein:

    the web page ~~can be~~ is bound to a form; and

    wherein the form encapsulates data that was posted to the web page group by a web browser or other client.

21. (Currently Amended):   A method for accepting a communication, comprising:

    providing the communication to a controller;

    associating a model with said communication;

    determining a state of the model based on said communication;

    providing a view based on the state of the model; and

    wherein the view is a web page in a web page group<u>;</u>

    <u>wherein the web page is the target of a first action method; and</u>

    <u>wherein the web page raises a second action method; and</u>

    <u>wherein the second action method implements code that results in website navigation.</u>

22. (Canceled)

23. (Currently Amended):   The method of claim [[22]] <u>21</u> wherein:

[[an]] <u>the first</u> action method can implement code that can results in website navigation, passing data, and/or invoking back-end business logic.

24. (Currently Amended):   The method of claim 21 wherein:

[[a]] <u>the</u> web page group ~~can control~~ <u>controls</u> web page flow between pages and other web page groups.

25. (Currently Amended):   The method of claim 21 wherein:

[[a]] <u>the</u> web page group ~~can include~~ <u>includes</u> application logic that is separate from a logic related to rendering a graphical user interface.

26. (Previously Presented):   The method of claim 21 wherein:

    the web page group can be nested within another web page group.

27. (Previously Presented):   The method of claim 21 wherein:

    the web page group maintains the state of the web pages in the group.

28. (Previously Presented):   The method of claim 21 wherein:

the web page group is a set of functionally related web pages.

29. (Previously Presented):   The method of claim 21, further comprising:

a global web page group to provide fallback action methods for the page.

30. (Currently Amended):   The method of claim 21 wherein:

the web page ~~can be~~ <u>is</u> bound to a form; and

wherein the form encapsulates data that was posted to the web page group by a web browser or other client.

31. (Currently Amended):   A method for accepting a communication, comprising:

providing the communication to a controller;

associating a model with said communication;

determining a state of the model based on said communication;

providing a view based on the state of the model;

wherein the view is a web page in a page group;

wherein the web page ~~can be~~ <u>is</u> the target of [[an]] <u>a first</u> action method; and

wherein the web page ~~can raise~~ <u>raises</u> [[an]] <u>a second</u> action method<u>;</u>

<u>wherein the second action method implements code that results in website navigation.</u>

32. (Currently Amended):   The method of claim 31 wherein:

[[an]] <u>the first</u> action method ~~can implement~~ <u>implements</u> code that [[can]] results in website navigation, passing data, and/or invoking back-end business logic.

33. (Currently Amended):   The method of claim 31 wherein:

a web page group ~~can control~~ <u>controls</u> page flow between web pages and other web page groups.

34. (Currently Amended):   The method of claim 31 wherein:

a web page group ~~can include~~ <u>includes</u> application logic that is separate from a logic related to rendering a graphical user interface.

35. (Currently Amended):   The method of claim 31 wherein:

the web page group ~~can be~~ is nested within another web page group.

36. (Previously Presented):   The method of claim 31 wherein:

the web page group maintains the state of the web pages in the group.

37. (Previously Presented):   The method of claim 31 wherein:

the web page group is a set of functionally related web pages.

38. (Previously Presented):   The method of claim 31, further comprising:

a global web page group to provide fallback action methods for the web page.

39. (Currently Amended):   The method of claim 31 wherein:

the web page ~~can be~~ is bound to a form; and

wherein the form encapsulates data that was posted to the web page group by a web browser or other client.

40. (Currently Amended):   A system comprising:

a means for providing a communication to a controller;

a means for associating a model with said communication;

a means for determining a state of the model based on said communication;

a means for providing a view based on the state of the model; and

wherein the view is a web page in a web page group;

wherein the web page is the target of a first action method; and

wherein the web page raises a second action method; and

wherein the second action method implements code that results in website navigation.

41. (Currently Amended):   A computer data signal embodied in a transmission medium, comprising:

a code segment including instructions to provide a communication to a controller;

a code segment including instructions to associate a model with said communication;

a code segment including instructions to determine a state of the model based on said communication;

a code segment including instructions to provide a view based on the state of the model; and

wherein the view is a web page in a web page group;

wherein the web page is the target of a first action method; and

wherein the web page raises a second action method; and

wherein the second action method implements code that results in website navigation.

42. (Currently Amended):   A machine readable medium having instructions stored thereon that when executed by a processor cause a system to:

provide a communication to a controller;

associate a model with said communication;

determine a state of the model based on said communication;

provide a view based on the state of the model; and

wherein the view is a page in a page group;

wherein the web page is the target of a first action method; and

wherein the web page raises a second action method; and

wherein the second action method implements code that results in website navigation.

43. (Canceled)

44. (Currently Amended):   The machine readable medium of claim [[43]] 42 wherein:

[[an]] the first action method can implement implements code that [[can]] results in website navigation, passing data, and/or invoking back-end business logic.

45. (Currently Amended):   The machine readable medium of claim 42 wherein:

[[a]] the web page group can control controls page flow between web pages and other web page groups.

46. (Currently Amended):   The machine readable medium of claim 42 wherein:

[[a]] the web page group ~~can include~~ includes application logic that is separate from a logic related to rendering a graphical user interface.

47. (Currently Amended):   The machine readable medium of claim 42 wherein:

the web page group ~~can be~~ is nested within another web page group.

48. (Previously Presented):   The machine readable medium of claim 42 wherein:

the web page group maintains the state of the web pages in the group.

49. (Previously Presented):   The machine readable medium of claim 42 wherein:

the web page group is a set of functionally related web pages.

50. (Previously Presented):   The machine readable medium of claim 42, further comprising:

a global web page group to provide fallback action methods for the web page.

51. (Currently Amended):   The machine readable medium of claim 42 wherein:

the web page ~~can be~~ is bound to a form; and

wherein the form encapsulates data that was posted to the web page group by a web browser or other client.
